

Microsoft Office Migration & Configuration Guide

1. Checking Microsoft Office Activation Status

Using Command Prompt:

1. Open Command Prompt as Administrator.
2. Run: `cd \Program Files\Microsoft Office\Office16` (or Office15/14 depending on version).
3. Run: `cscript ospp.vbs /dstatus`
4. Look for activation details such as:
 - License Status
 - Last 5 characters of Product Key
 - Activation Channel (Retail, MAK, KMS, O365 Subscription)

Using Office Account Window:

1. Open any Office app (Word, Excel, etc.).
2. Go to File → Account.
3. Under 'Product Information', view activation type.

2. Locating Outlook Email Signatures

Windows Path:

`C:\Users\%User%\AppData\Roaming\Microsoft\Signatures`

- This folder contains .htm, .rtf, and .txt versions of each signature.
- Copy this folder to migrate signatures to a new device.

macOS Path:

`~/Library/Group Containers/UBF8T346G9.Office/Outlook/Outlook 15 Profiles/Main Profile/Data/Signatures/`

3. Locating the Outlook Autocomplete (AutoStream) File

Windows Auto-Complete Stream File:

`C:\Users\%User%\AppData\Local\Microsoft\Outlook\RoamCache`

Files typically appear as:

- Stream_Autocomplete_*.dat

Copy the .dat file to migrate auto-complete entries.

4. Exporting Calendars & Contacts (IMAP Accounts)

Important: IMAP does not sync calendar or contacts. They exist only locally.

To Export Calendar:

1. Open Outlook.
2. File → Open & Export → Import/Export.
3. Choose 'Export to a file'.
4. Select 'Outlook Data File (.pst)'.
5. Select Calendar.
6. Export to a backup location.

To Export Contacts:

Use the same steps as calendar but select 'Contacts'.

5. Exporting Outlook Views & Settings

Export a View:

1. Open Outlook.
2. Go to View tab.
3. Click 'Change View' → 'Manage Views'.
4. Select the view → 'Copy' → Save as new view.

Backup Outlook Profile Settings:

Path: HKEY_CURRENT_USER\Software\Microsoft\Office\Outlook

- Export this registry branch to save:
 - View settings
 - Ribbon customizations
 - Navigation pane settings

Export Ribbon & Quick Access Toolbar Settings:

File → Options → Customize Ribbon → 'Import/Export'
